12 Attorneys for Defendant/Counter-Claimant  
AMERICAN TECHNICAL CERAMICS CORP.  
13

14 UNITED STATES DISTRICT COURT  
15 SOUTHERN DISTRICT OF CALIFORNIA

16  
17 PRESIDIO COMPONENTS, INC.,

Case No. 3:08-cv-00335-IEG-NLS

18 Plaintiff,

**ATC'S STATEMENT OF UNDISPUTED  
MATERIAL FACTS IN SUPPORT OF ITS  
MOTION FOR SUMMARY JUDGMENT OF  
INDEFINITENESS**

19 v.

20 AMERICAN TECHNICAL CERAMICS CORP.,

21 Defendant.

22  
23 **ORAL ARGUMENT REQUESTED**

AMERICAN TECHNICAL CERAMICS CORP.,

**Hearing Date: July 25, 2008  
Hearing Time: 10:00 am  
Courtroom 1**

Counter-Claimant,

v.

PRESIDIO COMPONENTS, INC.,

Counter-Defendant.

1           Defendant American Technical Ceramics Corp. (“ATC”) hereby sets forth the undisputed  
 2 material facts in support of ATC’s Motion for Summary Judgment of Indefiniteness.

3       1. Presidio Components, Inc. (“Presidio”) has asserted that claims 1-5, 16, 18 and 19 (“asserted  
 4 claims”) of U.S. Patent No. 6,516,356 (“the ‘356 patent”) are infringed by ATC’s 545L capacitor.

5       2. Claim 1 is an independent claim.

6       3. Claims 2-5, 16, 18 and 19 depend from, and thus incorporate all the limitations of, claim 1.

7       4. The ‘356 patent claims priority to and is a continuation-in-part of U.S. Patent Application  
 8 No. 10/150,202, filed on May 17, 2002, now U.S. Patent No. 6,587,327 (the “Priority Application”).

9 **“Substantially Monolithic” Dielectric Body**

10      5. All of the asserted claims of the ‘356 patent require “a substantially monolithic dielectric  
 11 body.”

12      6. The ‘356 patent does not expressly define “a substantially monolithic dielectric body.”

13      7. There is no test in the technical literature or elsewhere to determine whether a dielectric  
 14 body is substantially monolithic. (Transcript of Dr. Godhshalk’s deposition taken on March 17,  
 15 2008 (“Tr.”) 253:10-18.) The ‘356 patent specification also does not disclose such a test.

16      8. The claim term “a substantially monolithic dielectric body” is mentioned only twice in the  
 17 ‘356 patent specification:

18           The capacitor of the present invention is an integrated array of capacitors connected in series  
 19 and/or parallel circuits in a *substantially monolithic dielectric body*. (‘356 patent, col. 4, ll.  
 29-31.)

20           \* \* \*

21           the capacitor has a *substantially monolithic dielectric body* formed from a plurality of  
 22 ceramic tape layers laminated together in a green ceramic state and fired to form a sintered  
 23 or fused monolithic ceramic structure. (‘356 patent, col. 4, ll. 61-65.)

24      9. The specification of the Priority Application does not mention “a substantially monolithic  
 25 dielectric body.”

26      10. There are no degrees of “monolithicness” known to a person having ordinary skill in the  
 27 relevant art of the ‘356 patent. (Rule 4.2 Statement of Dr. Joseph P. Dougherty In Support of ATC’s  
 28 Claim Constructions (“Dougherty”) ¶ 27.)

11. Presidio's proffered expert, Dr. Edward M. Godshalk, states that the capacitor shown in  
 2 Figure 8A of the '356 patent is "non substantially monolithic" within the meaning of claim 1 but  
 3 could not determine whether a modified Figure 8A, shown below, would be "substantially  
 4 monolithic" within the meaning of claim 1 because "[t]hat's so subjective. I can't answer that one."  
 5 (Tr. 247:10-12, 248:1-8, 248:22-23.)

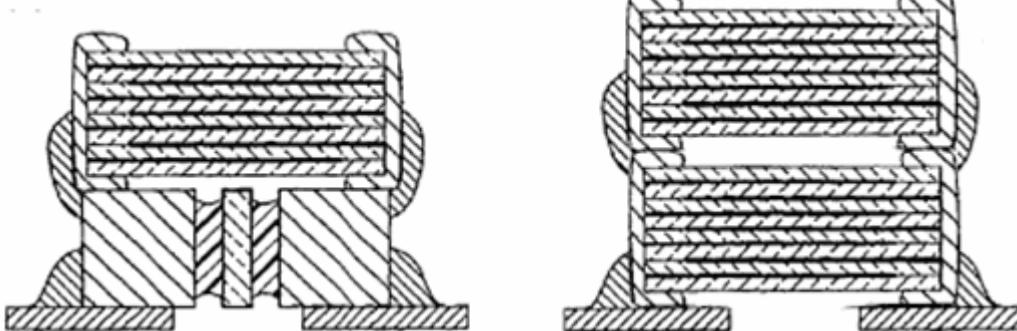

Figure 8A

Modified Figure 8A

**"Sufficiently Close" Contacts**

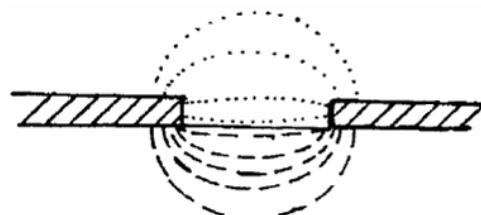

12. All of the asserted claims of the '356 patent require "a conductive first contact ..." and "a  
 13 conductive second contact ..." and further require "the second contact being located sufficiently  
 14 close to the first contact to form a first fringe-effect capacitance with the first contact."

15. Capacitance is measured in farads, which is symbolized F.

16. According to the laws of physics, fringe-effect capacitance is always present wherever two  
 17 electrical conductors are positioned in an edge-to-edge relationship, as depicted below:

FIGURE B. Fringe "Gap" capacitor

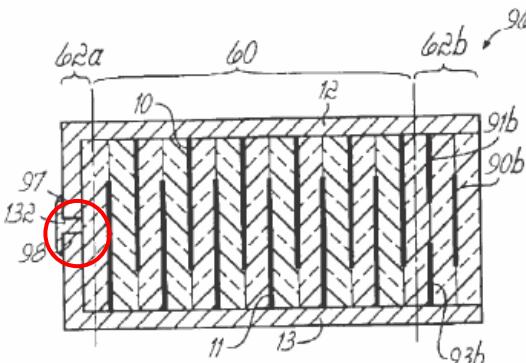

24 (Tr. 100:17-21, 107:11-17, Ex. 6; Dougherty ¶ 15.)

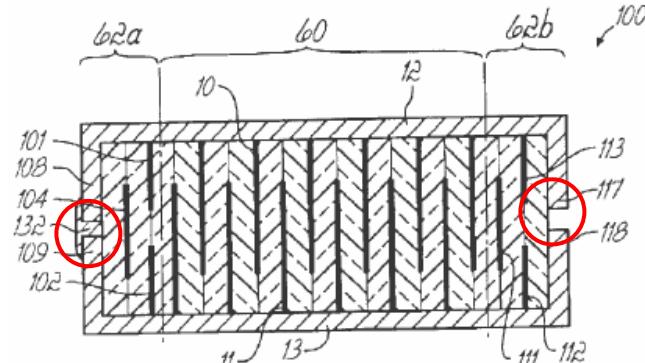

25 15. The requirement in claim 1 for the first and second contacts to be "located sufficiently  
 26 close" describes a spatial relationship. (Pres. Markman Br. at 12.)

1       16. According to the '356 patent specification, different fringe-effect capacitances are created  
2 by adjusting the gap width between the ends of contacts 12 and 13:

3       *the gap between ... [the ends] 97 and 98, 108 and 109, 117 and 118 [of contacts 12 and 13  
4 in Figures 18A and 19A]... and the fringe capacitances created thereby. ('356 patent, col.  
12, ll. 18-20.)*

11       **FIG. 18A**

12       **FIG. 19A**

13       17. Generally, the closer the edges of the contacts 12 and 13, the bigger the resulting fringe-  
14 effect capacitance.

15       18. The '356 patent specification does not provide any numerical values of the gap widths  
16 between contacts 12 and 13 for any of the capacitors shown in the figures or described in the  
17 specification of the '356 patent.

18       19. The '356 patent specification does not provide any numerical values of the fringe-effect  
19 capacitances between contacts 12 and 13 for any of the capacitors shown in the figures or described  
20 in the specification of the '356 patent.

21       20. Presidio alleges that the claim term "the second contact being located sufficiently close to  
22 the first contact to form a first fringe-effect capacitance with the first contact" is the "novel aspect"  
23 and "central idea" of the asserted claims. (Tr. 124:8-11; 138:4-8; 139:11-140:2; 144:14-19; 145:3-  
24 16.) All other elements of claim 1 are present in the prior art.

25       21. The capacitors shown in Figures 18A and 19A of the '356 patent have contacts 12 and 13  
26 "located sufficiently close ... to form ... fringe-effect capacitance" as claimed in claim 1. ('356  
27 patent, 10:66-11:3 and 11:31-35.) The '356 patent does not provide numerical values for the  
28 spacing or the fringe-effect capacitance between contacts 12 and 13 in Figures 18A and 19A.

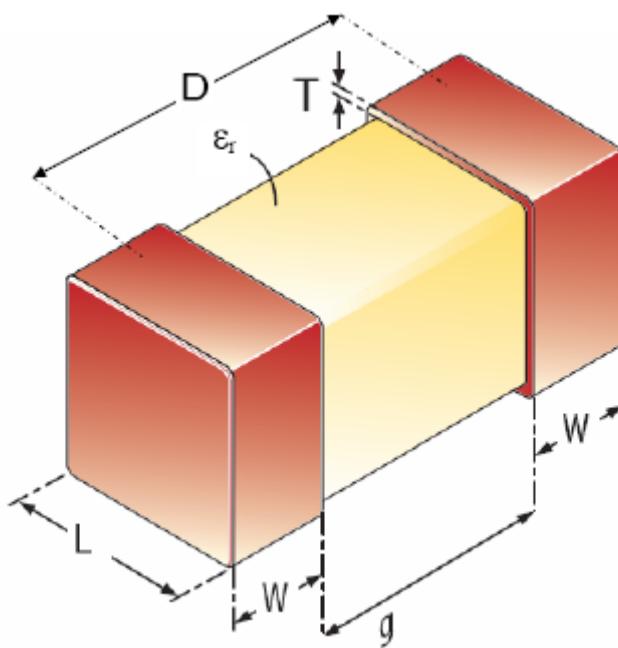

1       22. According to the '356 patent, the capacitor shown in Figure 2A does not have contacts 12  
 2 and 13 located "sufficiently close ... to form ... fringe-effect capacitance" as claimed in claim 1.  
 3 The '356 patent does not provide numerical values for the spacing between contacts 12 and 13 in  
 4 Figure 2A or specify the value of the fringe-effect capacitance formed.

5       23. According to the laws of physics, fringe-effect capacitance is always present wherever two  
 6 electrical conductors are positioned in an edge-to-edge relationship.

7       24. The capacitor shown in Figure 2A of the '356 patent is prior art to the asserted claims.

8       25. A combination of several variables other than the gap width also affects the resulting fringe-  
 9 effect capacitance between contacts 12 and 13. These variables include the thicknesses (T), lengths  
 10 (L), and widths (W) of the contacts 12 and 13, and the dielectric constant ( $\epsilon_r$ ) of the dielectric  
 11 material.

12       26. An accepted formula for calculating fringe-effect capacitance,  $C_{FE}$ , is  $\pi\epsilon_r\epsilon_0 L/2\ln[(\pi(D-W)/(W+T) + 1)]$ , where T is the thickness, L is the length, and W is the width of each contact, and  
 13 D is the distance between the center points of the contacts. As shown below, the gap width (g) is  
 14 equal to (D-W). The variable  $\epsilon_r$  is the relative permittivity of the dielectric material, also called its  
 15 dielectric constant, and  $\epsilon_0$  is the permittivity of air. (Dougherty n. 4, Ex. F; Tr. 236:1-13.)

1       27. The '356 patent specification does not provide any numerical values of the thicknesses T,  
 2 lengths L, or widths W of contacts 12 and 13, or dielectric constants  $\epsilon_r$  for the dielectric materials,  
 3 for any of the capacitors shown in the figures or described in the specification of the '356 patent.

4       28. Even capacitors having the same gap width between first and second contacts as shown  
 5 above in paragraph 26 can have different fringe-effect capacitances between the contacts.

6 **"First" Fringe-Effect Capacitance**

7       29. The '356 patent specification does not disclose any criteria for determining which fringe-  
 8 effect capacitance within a capacitor is the "first" as claimed in claim 1.

9 **Dependent Claims 2-5, 16, 18, and 19**

10      30. None of dependent claims 2-5, 16, 18, and 19 further define or limit the meaning of  
 11 "substantially monolithic" or "sufficiently close" as claimed in claim 1.

12 **Claim 3: "Sufficiently Close"**

13      31. In claim 3, the term "sufficiently close" has the same meaning as "sufficiently close" in  
 14 claim 1.

15 **Claim 18: "The Ceramic Body"**

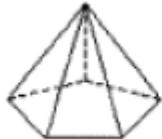

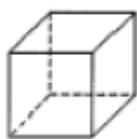

16      32. There is no prior recitation of "a ceramic body" in claim 1 or claim 18 to introduce the claim  
 17 term "the ceramic body" in claim 18.

18      33. Each of the capacitor structures shown in Figures 8A and 8B of the '356 patent have two  
 19 dielectric bodies.

20 **Claim 19: "Hexahedron Shape"**

21      34. The specification and prosecution history of the '356 patent provide no definition for  
 22 hexahedron shape.

23      35. All of the objects shown below are hexahedrons:

29      36. The term "hexahedron" encompasses any three-dimensional object having six (and only six)  
 30 sides.

1 37. The term "hexahedron" does not define a shape.

2 38. The term "hexahedron shape" in claim 19 is a requirement of the dielectric body, not the  
3 capacitor as a whole.

**CERTIFICATE OF SERVICE**

I, the undersigned, certify and declare that I am over the age of 18 years, employed in the County of New York, State of New York, and am not a party to the above-entitled action.

On June 11, 2008, I filed and served a copy of the following document(s):

**ATC'S STATEMENT OF UNDISPUTED MATERIAL FACTS IN SUPPORT OF ITS MOTION FOR SUMMARY JUDGMENT OF INDEFINITENESS**

by electronically filing the foregoing with the Clerk of the Court using the CM/ECF system which will send notification of such filing to the following:

Miles D. Grant, Esq.  
Grant & Zeko, APC  
1331 India Street  
San Diego, CA 92101
